Foreword

Innovative companies are defined by the unique characteristics which form their cultural identity, core values, beliefs, and mission.

Cognitive genetics technology has the power to raise humanity's collective cognitive capital to the point where the species can make a quantum leap into a new scientific paradigm which reflects our place as citizens in a conscious universe.

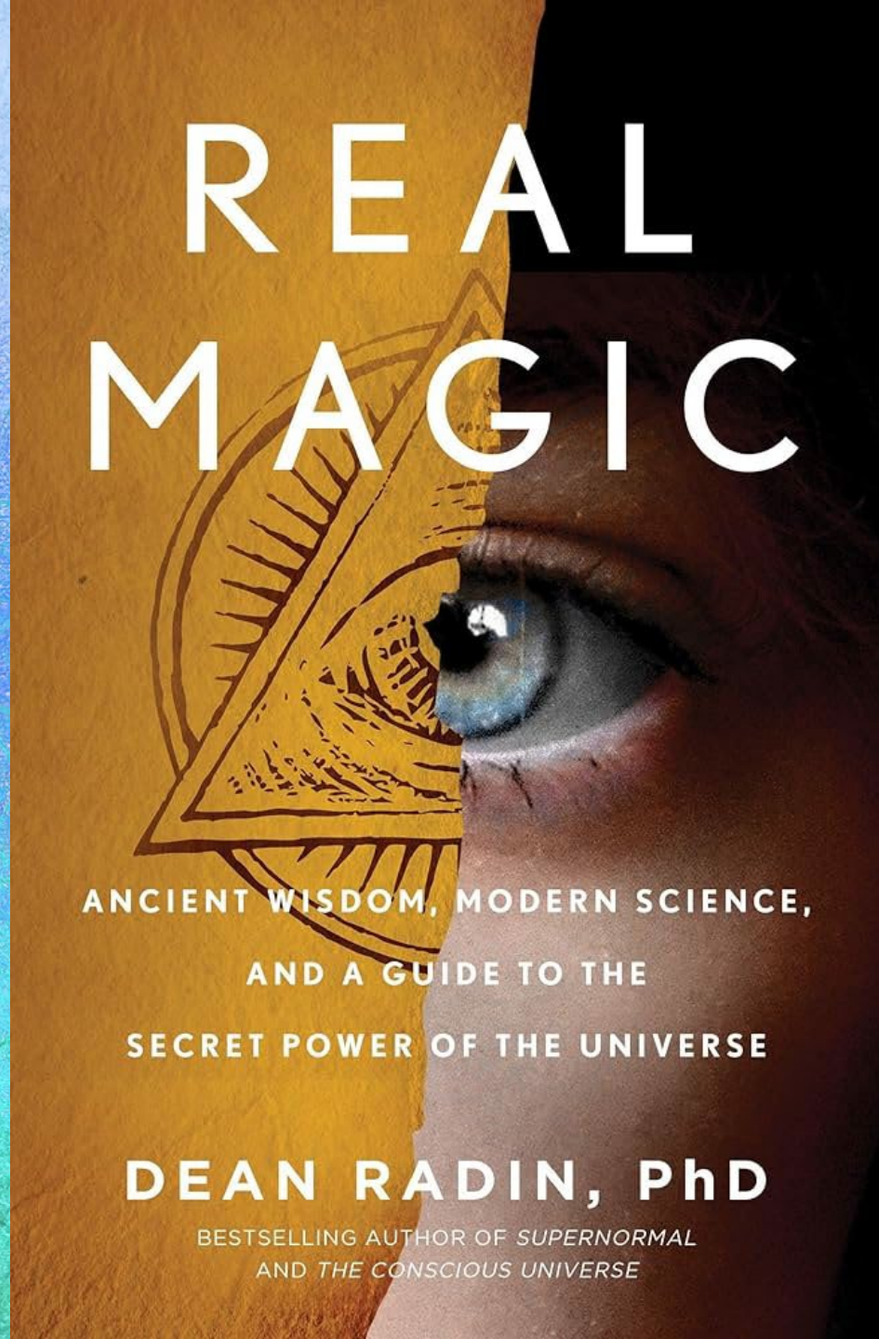
Since this shift can result in large-scale social transformation, ethical stewardship is of paramount importance.

This history preserves the origins of Cognigenics for the benefit of future generations of leadership.

Founders

Cognigenics arose out of consciousness research conducted independently by John Mee and Dr. Dean Radin over the course of four decades, which converged into a collaboration in 2013. Combining John's unique insights with Dean's wisdom and scientific acumen produced the company's foundation. Adding the deep neuroscience expertise of Dean's colleague, Dr. James Fallon, yielded the company's technology as we know it today.

The following slides describe Cognigenics' creation myth. Creation myths for companies often describe some magical beginning. Although magical thinking is foreign to science, the founders are in their element. Dean Radin's book "Real Magic" (2018) challenges the materialistic worldview that dominates modern science, suggesting that consciousness plays a fundamental role in the fabric of reality. Dean argues that accepting the reality of magic and integrating it with scientific understanding can lead to new insights into the nature of the universe and our place within it.

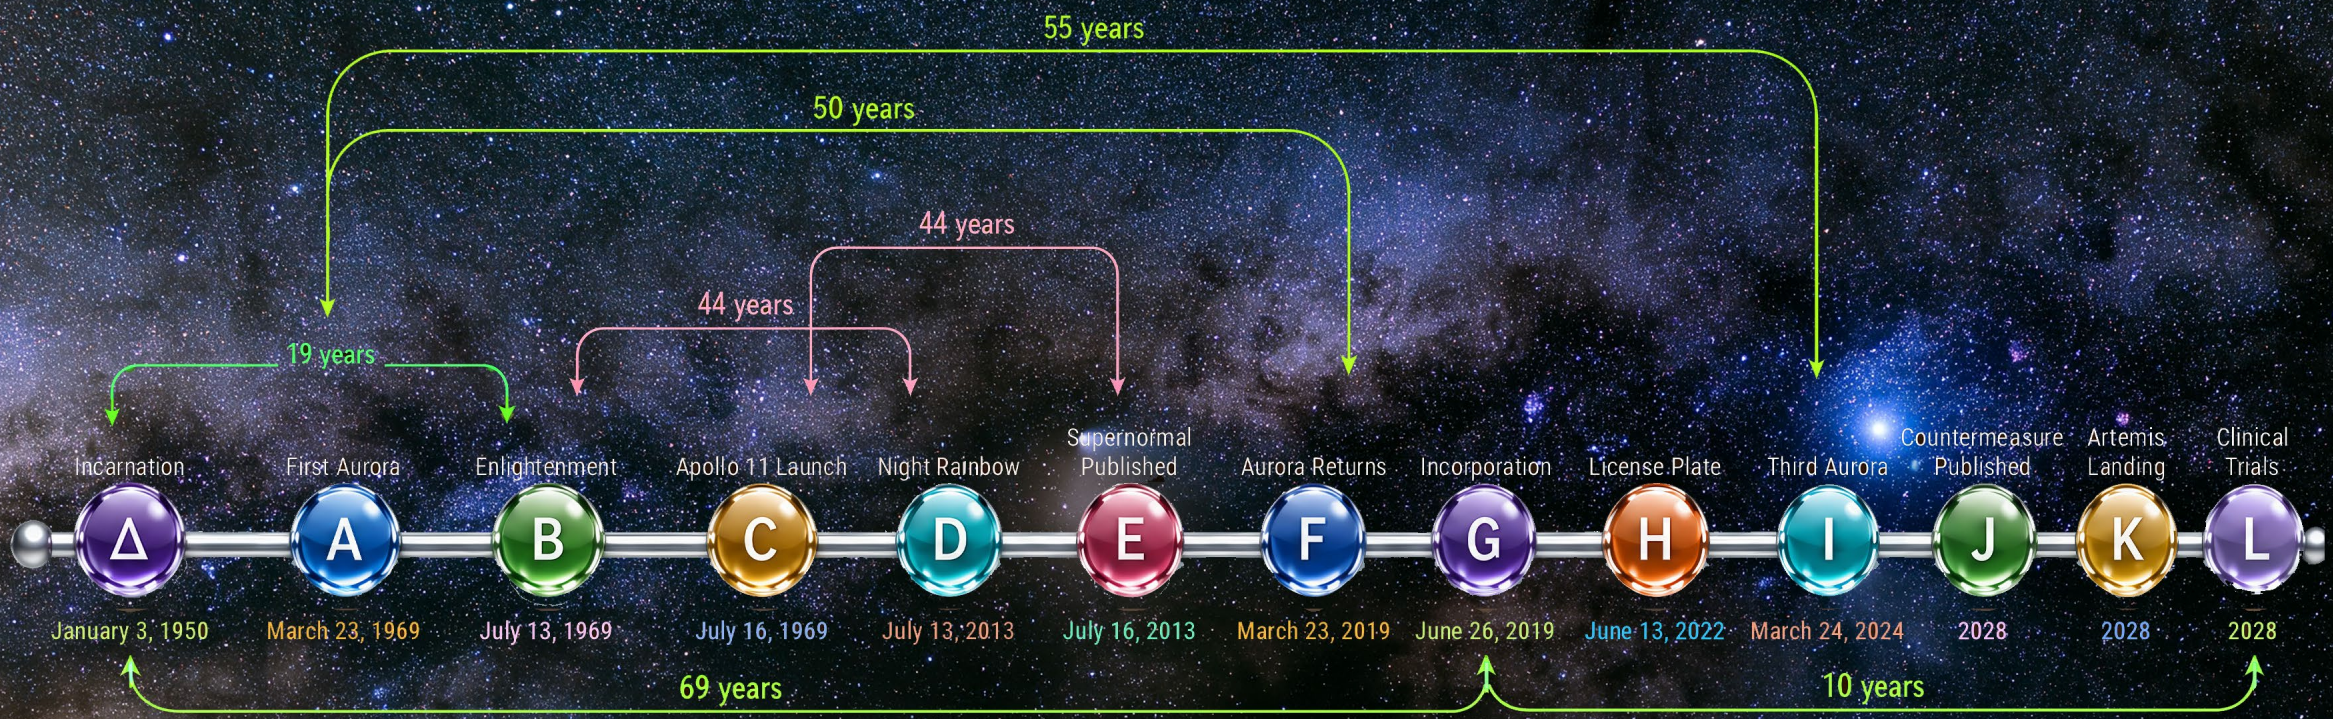


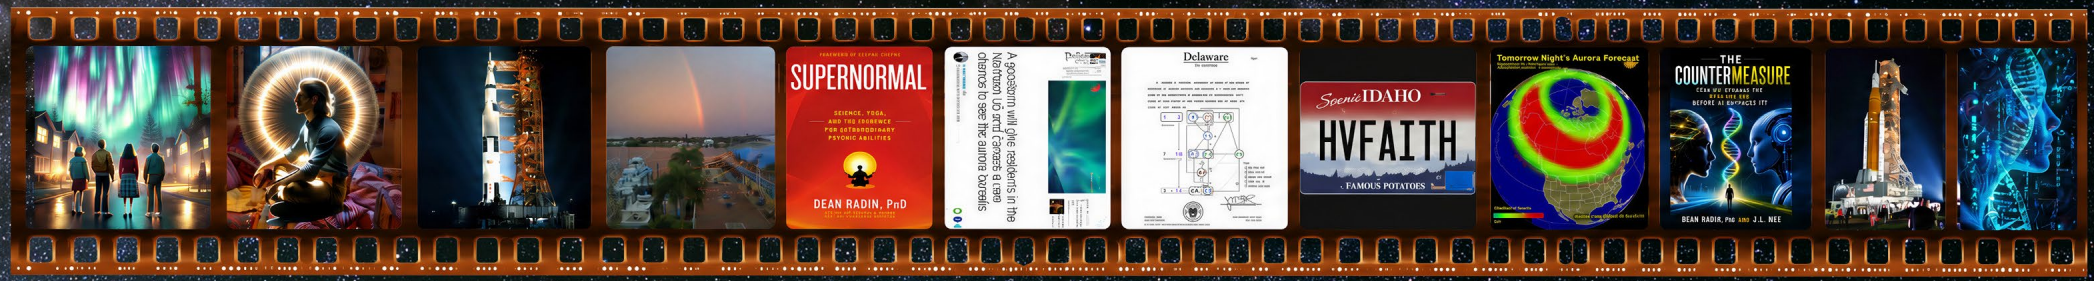
Down The Rabbit Hole

The company arose from a series of improbable incidents, unlikely synchronicities and miraculous events which suggest the presence of greater forces at work.

The major milestones are shown on the following timeline spanning over half a century.

Timeline





A B C D E F G H I J K L

L Cognitive genetics clinical trials yield favorable results.

K Artemis returns humans to the Moon.

J The CounterMeasure by Radin and Mee published

I The aurora returns 55 years after it first appeared.

H Dean Radin sees license plate at the moment of e-signing seed round financing

G Company incorporated 50 years after Bay Shore epiphany

F The aurora returns exactly 50 years after it first appeared.

E Dean Radin's book Supernormal published 3 days later, exactly 44 years after Aplool 11 launch

When John came home to Long Island from college on spring break in March, 1969, he went out to the Hamptons with his sister and mother to visit family there for a few days. On their way back home on Sunday, March 23, they passed through Bay Shore around dusk and stopped for a visit. They met his sister's new friend, Rita, and her brother, Mark, who was also home from college.

As this was John's first visit to Bay Shore, he wanted to walk around and see the area. So while their mothers socialized, the four students went out for a long walk around the neighborhood. To their astonishment, they saw a rare, breathtaking, full-color aurora borealis. The aurora looked like curtains of multicolored light hanging down from the heavens, stretching a hundred miles up into the sky.

The next day, the aurora was reported in 81 newspapers. It was not likely that John would ever witness an aurora at all, as the northern lights are not normally seen in these latitudes. It was even more improbable the aurora he saw would be as magnificent as it was. (News reports called it the most spectacular display since 1941.) However, thousands of people on Long Island saw the aurora that night, so his sighting, while unlikely, was not unique.

What *is* unusual is that he saw the aurora on his first visit to Bay Shore, and that on his second visit four months later, he experienced a profound spiritual illumination that changed his life. It made him wonder if the aurora was a sign portending what was to come.

When John returned to Bay Shore four months later on July 13, 1969, he had a six hour out-of-body experience during meditation on LSD which shaped the rest of his life. He reached 100 times his normal level of awareness and spent hours in a state where light, bliss and awareness are indistinguishable from one another.

While in this state, he received insights about the nature of consciousness and the mind/matter interface which influenced his later work.

As John's awareness continued to expand, a glassy, helix-shaped object several feet tall appeared before him with thousands of glittering facets. His body's eyes were closed and he saw the object directly. In retrospect, he believes he saw his spiritual DNA template; permanent memory of the information frequencies which coalesce into physical DNA. This epiphany planted seeds which years later germinated into strategies for modifying genes to enhance awareness.

Eventually, he found himself as a bubble in a field of pure awareness which extended infinitely in all directions….and was self-aware. The physical universe was far below like a large, sparkling diamond. Beholding the majesty of Creation forever changed him.

John’s epiphany on July 13, 1969 occurred literally at the dawn of the Space Age while Apollo 11 was perched on its launching pad; three days from liftoff for its historic journey to the Moon.

A few years later, the Saturn V rocket would carry astronaut Edgar Mitchell to the Moon on Apollo 14. Mitchell would later found the Institute for Noetic Sciences, where Dean Radin was Chief Scientist for over three decades.

To honor his experience in Bay Shore, John dedicated every July 13th thereafter to meditation and gratitude. To commemorate the 44th anniversary, he took a hotel room on the water on July 13, 2013 (7-13-13). An unusual night rainbow appeared that evening, like an echo of the first aurora.

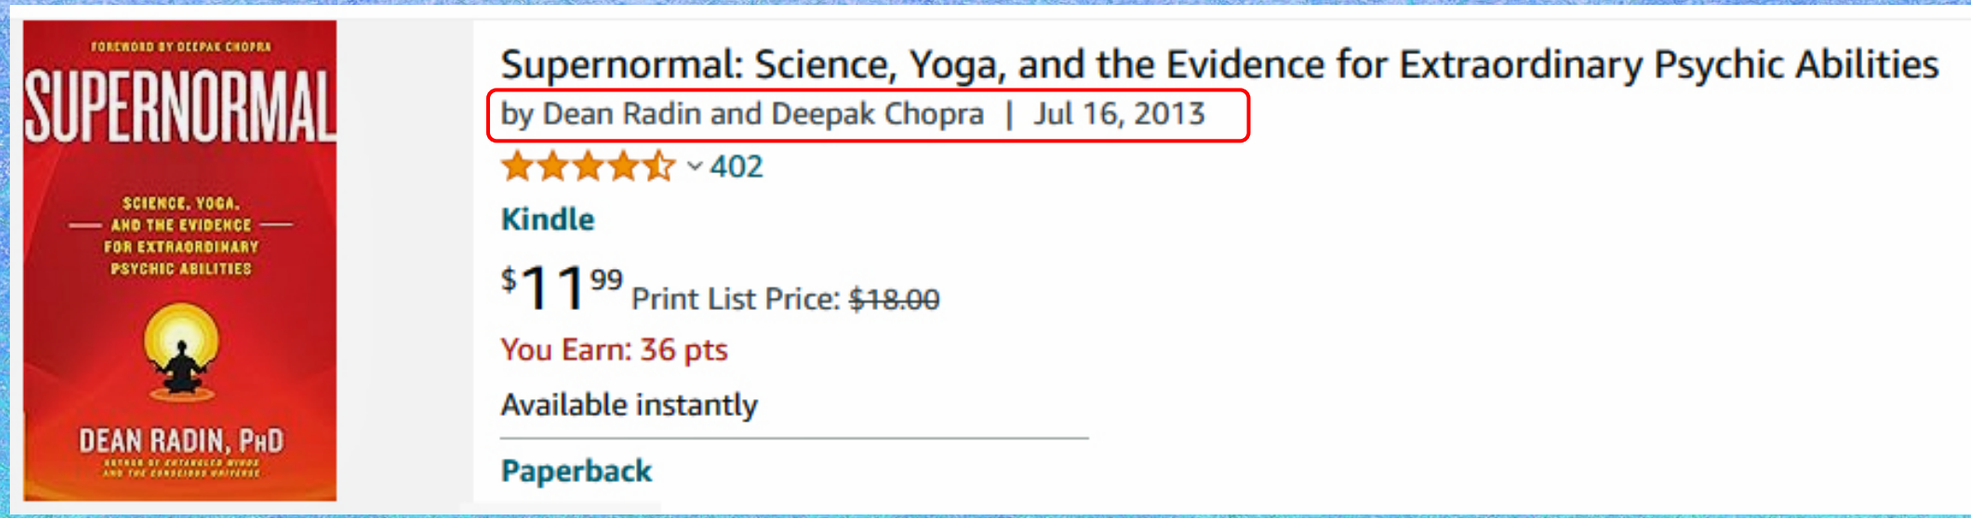
Three days after the night rainbow appeared on July 13, 2013, Dean's third book, *Supernormal*, was published; 44 years to the day after the Apollo 11 launch. *Supernormal* presents evidence that meditation increases psi abilities (ESP), and that these abilities are characteristic of non-local consciousness.



Meditation is known to lower brainwave activity into the lower-frequency alpha and theta states. Meditators in these states who demonstrated increased psi abilities provided evidence that increased non-local consciousness (which has no wavelength) is correlated with reduced brainwave activity (which has wavelength).

After reading *Supernormal* in 2013, John contacted Dean to request his mentorship in developing a new branch of cognitive science based on the two pillars of quantum non-locality and bimodal causation described in Dean's first book, *Conscious Universe*. Dean agreed, and the two men began collaborating on a theory for explaining the mind/matter interface to provide a scientific basis for enhancing human cognition.

They reasoned that since higher states of consciousness and cognitive ability are likely to have a greater non-local component, and because non-local consciousness has no wavelength, then states of expanded awareness and cognition should be correlated with reduced brainwave activity, as Supernormal implies.

John and Dean discovered a large body of scientific evidence indicating that conscious attention and cognitive capacity expand when brainwave activity is attenuated, and that slower brainwave frequencies are correlated with reduced stress. This pointed their thinking in the right direction of downregulating neuronal excitability to enhance cognition. When CRISPR emerged in 2016, they realized they had a tool to implement their theory, and after extensive research, began filing patents 2 years later.

In 2019, half a century after 1969, around a month before the fiftieth anniversary of the aurora, John started planning how to honor the day, as recorded in his journal on February 24, 2019. He decided to spend the day in gratitude, prayer and meditation.

Date/
2/24/19

Watched Electric Sheep rides with Rita and Scott. Lots of laughs. Good time.

In about one month, it will be fifty years since I saw the Bayshore aurora borealis. So now would be a good time for me to start to work with the energy and thought forms and feelings around that.

So I need to enter something in to happen on that day, for sure. I can jot down ideas between then and now.

You don't have to be a math whiz to know the odds of a full color aurora borealis to occur on my first visit to Bayshore are astronomical.

On the day of the fiftieth anniversary, when he came downstairs for breakfast on the morning of Saturday, March 23, 2019, John told his wife, Rita, he would be taking the day aside as planned. She told him all the major news channels were reporting the aurora was returning that night.

Everything stopped. He stood on the stairs for several minutes, trying to wrap his head around this. The aurora was coming back on the evening of March 23, 2019, fifty years to the day since he witnessed it in Bay Shore on March 23, 1969.

The odds of the aurora returning in exactly fifty years are quite slim. For five decades, John wondered if the first aurora was a coincidence or a heavenly sign. The second aurora suggested an answer.

When the company raised its first seed round on June 13, 2022, the investors and key stakeholders decided to meet on a conference call and simultaneously sign the investment agreement electronically. At the time, Dean and his wife, Suzie, were driving through Nevada, so he called in on his cell phone. At the appointed moment, everyone on the call pressed their button to accept the agreement. At that instant, Dean and Suzie saw a car with a license plate that read: HVFAITH.

Dean shared this astonishing coincidence with everyone on the call. The funding allowed the company to conduct multiple laboratory experiments which conclusively demonstrated its technology.

A coronal mass ejection on March 23, 2024 caused powerful geomagnetic storms with intense aurora activity on March 24, 2024.

The probability of auroras occurring on March 23, 1969 and March 23, 2019 and March 23 or 24, 2024 is 1 in 50,250.

SEVERE (G4) GEOMAGNETIC STORMS OBSERVED - 24 MARCH 2024

published: Sunday, March 24, 2024 17:40 UTC

The 23 March CME arrived at around 24/1411 UTC. Severe (G4) geomagnetic storming has been observed and is expected to continue through the remainder of the 24 March-UTC d
March.

The company's creation myth is an inspiring story underpinning its noble purpose with a myriad of synchronicities and heavenly signs.

Taken individually, these events can be dismissed as coincidences, but when added together, they form a pattern which cannot be explained by conventional science.

This suggests the possibility that the company may be guided by a higher intelligence which, if true, bodes well for our collective efforts to realize the great promise of our technology.

Cognigenics
